- EC point for filling out our CS61B survey. Watch the website.

Lecture #40: Course Summary

- Programming language: Java

- Program Analysis

- Categories of data structure: Java library structure

- Sequences

- Trees

- Searching

- Sorting

- Pseudo-random numbers

- Graphs

- Pragmatic implementation topics

Programming-Language Topics

- Object-based programming: organizing around data types

- Object-oriented programming:

  – Dynamic vs. static type

  – Inheritance

  – Idea of interface vs. implementation

- Generic programming (the <···> stuff).

- Memory model: containers, pointers, arrays

- Numeric types

- Java syntax and semantics

- Scope and extent

- Standard idioms, patterns:

  – Objects used as functions (e.g., Comparator)

  – Partial implementations (e.g., AbstractList)

  – Iterators

  – Views (e.g., sublists)

Analysis and Algorithmic Techniques

- Asymptotic analysis

- $O(\cdot), o(\cdot), \Omega(\cdot), \Theta(\cdot)$ notations

- Worst case, average case.

- Amortized time

- Memoization and dynamic programming.

Major Categories of Data Structure

- Collection interface and its subtypes

- Map interface and its subtypes

- Generic skeleton implementations of collections, lists, maps (`AbstractList`, etc.)

- Complete concrete collection and map classes in Java library

Sequences

- Linking:

  – Single and double link manipulations

  – Sentinels

- Linking vs. arrays

- Stacks, queues, deques

- Circular buffering

- Trade-offs: costs of basic operations

Trees

- Uses of trees: search, representing hierarchical structures

- Basic operations: insertion, deletion

- Tree traversals

- Representing trees

- Game trees

Searching

- Search trees, range searching

- Multidimensional searches: quad trees.

- Hashing

- Priority queues and heaps

- Balanced trees

  - Rebalancing by rotation (red-black trees)
  - Balance by construction (B-trees)
  - Probabilistic balance (skip lists)
  - Tries

- Search times, trade-offs

Sorting

- Uses of sorting

- Insertion sort

- Selection sorting

- Merge sort

- Heap sort

- Quicksort and selection

- Distribution sort

- Radix sort

- Complexity of various algorithms, when to use them?

Random numbers

- Possible uses

- Idea of a pseudo-random sequence

- Linear congruential and additive generators

- Changing distributions:

  - Changing the range
  - Non-uniform distributions

- Shuffling, random selection

Graph structures

- Definition

- Uses: things represented by graphs

- Graph traversal: the generic traversal template

- Depth-first traversal, breadth-first traversal

- Topological sort

- Shortest paths

- Minimal spanning trees, union-find structures

- Memory management as a graph problem.

Debugging

- What debuggers can do

- How to use to pin down bugs

- Details of some debugger (Eclipse, gjdb, various Windows/Sun products, IntelliJ).

- Unit testing: what it means, how to use it.

- JUnit mechanics.

Version Control

- What's it for?

- Basic concepts behind our particular system:

    – Working copy vs. repository copy

    – Committing changes

    – Updating and merging changes.

    – Tagging

A Case Study

- Presented Git version-control system as an example of a design using several ideas from this course.

- Graph (DAG) and tree structures represented with files as vertices and strings (file names), rather than machine addresses, as pointers.

- Use of hashing to create unique (or very, very likely to be unique) names: *probabilistic data structure*.

Assorted Side Trips

- Compression.

- Parallel processing.

- Storage management and garbage collection.

What's After the Lower Division?

- CSC100/Data C100: Principles & Techniques of Data Science (Perez, Wan, …)

- CS152: Computer Architecture (Wawrzynek)

- CS160: User Interface Design (Canny)

- CS161: Computer Security (Weaver)

- CS162: Operating Systems and System Programming (Joseph, Kubiatowicz)

- CS164: Programming Languages and Compilers (Chasins)

- CS168: Intro. to the Internet: Architecture and Protocols

- CS169A, CS169L: Software Engineering (Ball, A. Fox, P. Fox)

What's After the Lower Division? (II)

- CS170: Efficient Algorithms and Intractable Problems (Raghavendra)
- CS171: Cryptography
- CS172: Computability and Complexity (Tal)
- CS174: Combinatorics and Discrete Probability (Song)
- CS176: Computational Biology (Yosef)
- CS182: Deep Neural Networks (Zhang)
- CS184: Foundations of Computer Graphics (Ng)
- CS186: Databases (Jain)
- CS188: Artificial Intelligence (Russell, Song)
- CS189: Machine Learning (Shewchuk, Zhang)
- CSC191: Quantum Information Science and Technology

What's After the Lower Division? (III)

- CS194: Assorted Special Topics: Computer Vision and Computational Photography (Efros), Parallel Programming (Yelick)

- CS195: Social Implications of Computer Technology (Hug)

- Numerous graduate courses: including advanced versions of 152, 160, 161, 170, 184, 186, 189; plus Cryptography, VLSI design and many special topics.

- And, of course, EE courses!

- Various opportunities for participating in research and independent study (199) or directed group studies (198).

And Beyond!

- But EE and CS are just two of over 150 subjects!

- Internships offer more specific skills and exposure to real problems.

- Above all, I think that CS is a creative activity that (to the true artists) ought to be fun!
